Systems and processes automated

3+ years

Automating processes with code

PROFESSIONAL SUMMARY

Turning manual, slow, or paper-based processes into automated, scalable, reliable systems — that's what drives me. I'm a **Software Developer** focused on **data architecture and business process automation**, with hands-on experience managing large-scale production databases and designing end-to-end systems that power real operations today. I love digging into the real problem behind every requirement, designing the right solution, and shipping it to production. **Proactive, resilient, and endlessly curious** about learning new technologies and domains.

PROFESSIONAL EXPERIENCE

Software Developer Ssr — PITSE

Jul 2023 - Present

Buenos Aires Province, Argentina

- ▶ I design and automate critical business processes (ABMC, error control, B2C flows) on a database that scales from ~8 MB to over 300 MB, eliminating repetitive manual work.
- ▶ I diagnose and resolve critical production incidents, prioritizing root cause over symptoms and restoring service with no impact to end users.
- ▶ I act as a bridge between business and engineering, translating business rules and terminology into concrete technical solutions.

Full Stack Developer Junior — Instituto Leonardo Murialdo

Mar 2022 - Nov 2022

Buenos Aires Province, Argentina

- ▶ Designed and automated "Ayuda al Vecino", digitizing a previously 100% manual communication process for the Municipality of Tres de Febrero.
- ▶ Defined the full architecture of the solution —frontend, backend, and database— including deployment on the institute's local server.

INDEPENDENT PROJECTS

Inventory & E-commerce Management System — Independent Project

Jan 2026 - Apr 2026

Independent consulting / development for an SME

- ▶ Identified a 100% manual, paper-based purchasing and inventory process, and automated the full flow: inflow, outflow, cost/margin calculation, and cash reconciliation.
- ▶ Built a real-time reporting dashboard (weekly and monthly margins) that gave the business visibility into its profitability for the first time.

Vulnerability Testing Management System — Cybersecurity Project

Mar 2023 - Nov 2024

- ▶ Designed and automated the scanning, classification, and logging of website vulnerabilities, with an integrated incident-management module.

Services Website — Independent Project for a Solo Professional (Tarot Reader)

Mar 2026 - Mar 2026

- ▶ Automated the contact and ordering flow via WhatsApp, streamlining client conversion. — tarot-web-alpha.vercel.app

Corporate Website — RV Soluciones (Logistics Company)

Jan 2026 - Jan 2026

- ▶ Designed the digital identity for a logistics company to speed up and simplify business contact. — rv-web-c.vercel.app

TECHNICAL PROFILE

Data & modeling: SQL, MySQL, PostgreSQL, MongoDB, relational data modeling, Navicat, HeidiSQL

Architecture & backend: Node.js, Express, PHP, CakePHP v.2, API architecture, ABMC

Frontend & tools: React, Redux, JavaScript, HTML, CSS, Bootstrap, Git, Scrum/Agile

EDUCATION

- ▶ **Engineering in Information Systems.** UTN. 2023 - present
- ▶ **Technical Degree in Computer Science.** Instituto Leonardo Murialdo. 2019 - 2022
- ▶ **Full Stack Web Developer.** Henry Bootcamp. 700 hrs theoretical-practical. 2022 - 2023
- ▶ **Languages:** English — B2, Upper-Intermediate · Spanish — Native
